## **Smart Fracture Network Conductivity Enhancer**

Far-field proppant distribution  
in the fracture network to  
maximize reservoir conductivity  
without increasing fluid viscosity.

**KEANE**

# AirRide

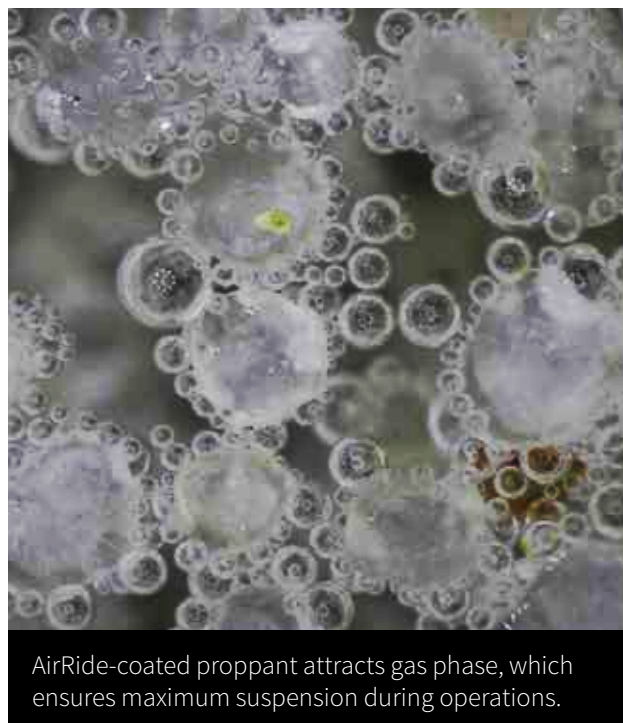

## Smart Fracture Network

### Conductivity Enhancer

The AirRide™ conductivity enhancer improves far-field proppant distribution in the fracture network, maximizing reservoir conductivity without increasing fluid viscosity—even in tight formations. AirRide is an engineered solution for production enhancement that uses conventional operational procedures and equipment at the wellsite and is compatible with all water types.

#### Proven track record

- 43-well study documents comparison of AirRide and slickwater:
  - 42% improvement in average maximum proppant concentration
  - 30% production increase
  - 23% completion cost reduction
- Flow model tests comparing AirRide and slickwater show:
  - 70% improvement in pack height

#### Reach maximum conductivity

- Increases depth of penetration by fluidizing proppant in slickwater fluid
- Enhances flowback and production of the well
